ABOUT ME

Junior Python Developer with experience in data analysis, SQL databases and small application development. It applies the principles of clean code and versioning, with a focus on quality and precision. Independent, but also a good team player, motivated for continuous learning and contribution to results from day one.

EDUCATION

CERTIFIED PYTHON DATA ANALYST
IT Academy
2024 - 2025

Road traffic technician
Mechanical - traffic school
2017 - 2021

INDIVIDUAL QUALITIES

- Communication and effective explanation of technical and non-technical ideas;
- Teamwork and collaboration in cross-functional development environments;
- Strong problem-solving and analytical thinking to handle complex technical challenges;
- Adaptability and continuous learning to keep up with evolving technologies;
- Time management, self-organization and personal responsibility for delivering results.

LANGUAGE

- Serbian (native)
- English

PROJECTS

FitTrackr - Data Cleaning & Basic Analysis — *2025, January*

- *Lightweight Python project that demonstrates simple data cleaning and exploratory analysis on a small fitness dataset.*

Netflix Data Analysis Project — *2025, June*

- *This project analyzes Netflix content data using R programming language and various data science techniques. The analysis explores patterns in Netflix's movie and TV show catalog, including content types, release years, genres, and other relevant metrics.*

Library Reading Analysis — *2025, July*

- *Professional, reproducible analysis of library user behaviour. This repository contains an R script that fits a regression model to predict number of books read from member age and membership duration, builds a simple classifier for "heavy readers", creates visualisations and exports example predictions.*

Movie Database Analysis Project — *2025, March*

- *A comprehensive analysis of movie industry data using MySQL, Python, and data visualization techniques.*

Product Category Prediction Model — *2025, August*

- *This project implements a machine learning model that predicts product categories based on product names. The model is designed to automatically classify products into appropriate categories, making it useful for e-commerce platforms and product management systems.*

SKILLS

Python | R | AWS | Git | GitHub | MySQL | Pandas | Numpy | Matplotlib| Seaborn| Plotly | Request | Scikit-learn | Jupyter Notebook | Google Colab | Kaggle | AWS Management Console | AWS S3 | AWS Lambda | AWS EventBridge | AWS CloudWatch | AWS IAM

CERTIFICATIONS

[PCEP-30-02] PCEP™ – Certified Entry-Level Python Programmer
Python Institute, 2025

CERTIFIED PYTHON DATA ANALYST
IT Academy, 2025

Personal Development Program
IT Academy, 2025
